I	Executive Summary	4
II	Scientific motivation	8
III	ADV Computing Model	10
1	Computing and Data Access workflows	11
1.1	General description and basic features	11
1.2	Commissioning and operation	11
1.3	Detector characterization and noise monitoring	11
1.3.1	On-line analysis	11
1.3.2	In-time analysis	11
1.3.3	Off-line analysis	11
1.4	Science data analysis	11
1.4.1	Low latency searches	11
1.4.1.1	CBC	11
1.4.1.2	Burst	11
1.4.2	Off-line searches	11
1.4.2.1	Burst	11
1.4.2.2	CBC	11
1.4.2.3	CW	11
1.4.2.4	Stochastic	11
IV	ADV Data Model	12
2	Primary Data Set: raw and derived data types	13
2.1	Rawdata	13
2.2	50 Hz, trenddata	13
2.3	Reduced Data Sets	13
2.4	Science data $h(t)$	13
3	Analysis Output Data	14
3.1	Commissioning and Detchar	14
3.2	Science Data analysis	14
3.2.1	Burst	14
3.2.2	CBC	14
3.2.3	CW	14
3.2.4	Stochastic	14

4	Data management and distribution	15
4.1	Data management at EGO-Cascina (“Tier-0”)	15
4.1.1	Local archiving	15
4.1.2	Low-latency Data Transfer	15
4.1.3	Bulk Data Transfer	15
4.2	Virgo data distribution and Archiving at CCs (“Tier-1s”)	15
4.3	Network requirements	15
4.4	LIGO data distribution and data archiving at CCs (“Tier-1s”)	15
5	Data Access Model	16
5.1	Data Bookkeeping	16
5.1.1	Metadata catalog (LIGO/Virgo Data Base,LVDB)	16
5.1.2	File locator Data Base	16
5.2	Data Access	16
5.2.1	Local Data Access in the CCs	16
5.2.2	Remote Data Access	16
V	Software management	17
6	Base Virgo software	18
7	Data Analysis software	19
VI	Computing facilities resource requirements	20
8	Cascina (Tier-0)	21
8.1	Computing farm for commissioning and analysis	21
8.2	Storage farm	21
9	CNAF (Tier-1)	22
9.1	Computing	22
9.2	Storage	22
10	CCIN2P3 (Tier-1)	23
10.1	Computing	23
10.2	Storage	23
11	Tier-2s	24
11.1	Rome farm	24
11.2	Other	24
VII	Other key topics	25
12	Platform, Operating System	26
13	Users credentials	27
VIII	APPENDIX	28
14	APPENDIX A: detailed answer to ECC comments	29

15 APPENDIX B: summary of the requirements for the Cascina farm	30
16 APPENDIX C: summary of the requirements for the CCs	31
References	32
